

## THANK YOU FOR PURCHASING A CIVILTECH SOFTWARE PRODUCT

The program you have bought is run from the USB key inside the package. Both the program and the manual can be found inside the key. You can run the program directly from the key; no installation is required.

### Getting Started:

- The key has a memory of 128 MB, and USB 2.0 connectivity. It functions the same way as a USB flash drive, but with a special chipset inside. The key is compatible with Windows 2000, Xp, or higher, but may not work with Windows 98.
- **Insert** the key into any USB port in your computer. If you do not have an extra USB port, you should buy a USB extension cord (about \$10-\$20)
- **Wait** until the small light on the back of the USB key stops flashing and stays red. This means that Windows has detected the USB key. A small panel may pop up that says “USB mass storage device found”, you can either close this panel or click “OK”.
- **Do not** remove the key while the light is blinking, as that will damage the key. You can remove the key only during the following situations:
  1. *Your computer is completely turned off, or*
  2. *You have safely ejected the key from the system. You can do this by going down to the Windows task bar, finding the icon that says “Unplug or Eject Hardware” (usually located at the bottom right-hand side of the screen) and clicking on that. It will then tell you when it is safe to remove the hardware.*

### Running the Program Within the Key:

- After you insert the key, use Windows Explorer (or click My Computer) to check the USB drive (on most computers, it is either called D:, E:, or F:). You will find some files inside. There is a folder called “/Keep” inside. Do not change, remove, or delete this folder or the files inside, or else your key will become void.
- If you purchased Allpile, you will find a folder called “/Allpile7”. Open this folder and find Allpile.exe. Double click this program to run Allpile from your key. No installation is required on your computer. For other software, the file name can be found in the table below.
- You can also create a new folder, save and open your project files directly to and from your key. There should be enough room on the key for your files.
- The manual is also located in the Key, in PDF form. Double-click on the file to open it. You need Adobe PDF to read this file, which is downloadable free of charge from Adobe’s website. (<http://www.adobe.com>)

### Running the Program from your Hard Disk:

- You can also run the program from your hard disk; the program may run a little bit faster from your hard disk. You need to install the program on your hard disk first.
- In USB drive, find setup file. The name of the setup file can be found in the table below.
- Double click the setup file to run installation of the software on your hard disk.
- You still need to plug the USB key into the USB port to run the program.

### Folders, .exe File, and Setup File Names in the Key

The follow table shows what the folder and .exe files are called based on the software you purchased.

Software and Version	Folder Name	.exe File Name	Setup File
Allpile version 7	/Allpile7	allpile.exe	al_setup.exe
Shoring Suite version 7	/Shoring7	ShoringSuite.exe	sh_setup.exe
LiquefyPro version 5	/Liquefy5	liquefy.exe	li_setup.exe
SuperLog version 4	/Superlog4	SuperLog4.exe	su_setup.exe
